Megarift Survivors

Features of this port - version 0.1.3-alpha.10

A free, fan-made, **offline** survivor-like for Android. Survive endless waves of Pokémon, level up, evolve your moves, open rifts to fight legendaries and face the final boss.

This is a fork of **JayElDragon's Godot port** of **PokéSurvivor by JPTER78**. It keeps everything from that port (touch and gamepad controls, 11 languages, local saves, minimap, 960+ Pokémon, gacha, missions, achievements) and adds the systems and balance that make the independent rewrite at pokesurvivor.doofcraft.com feel different: Mega Evolution, rarity-tier cards, Hyper mode, a real final boss, an endgame, save-and-resume and more.

Generated from README.md and docs/features.json on every commit.

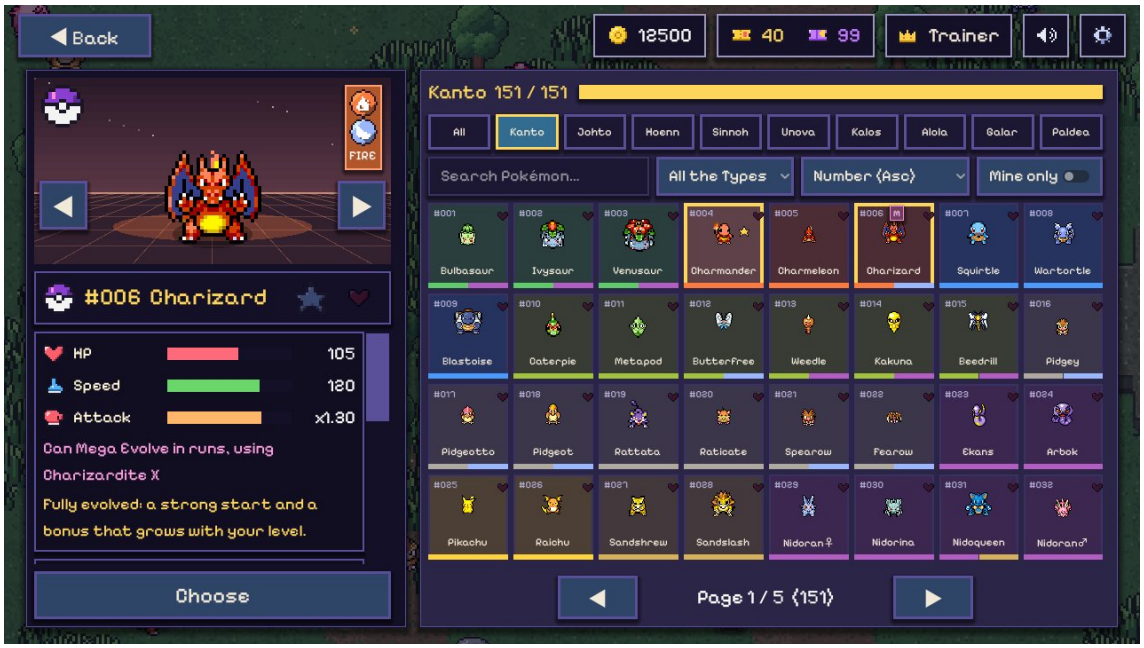

What's new compared with the base port

Mega Evolution

A rare Unique card from minute 30 (15 in Hyper) transforms 41 capable Pokémon: 37 Megas, Primal Kyogre/Groudon and Crowned Zacian/Zamazenta. +30% damage and HP, +10% speed, -10% cooldowns, new look and type.

mega charizard

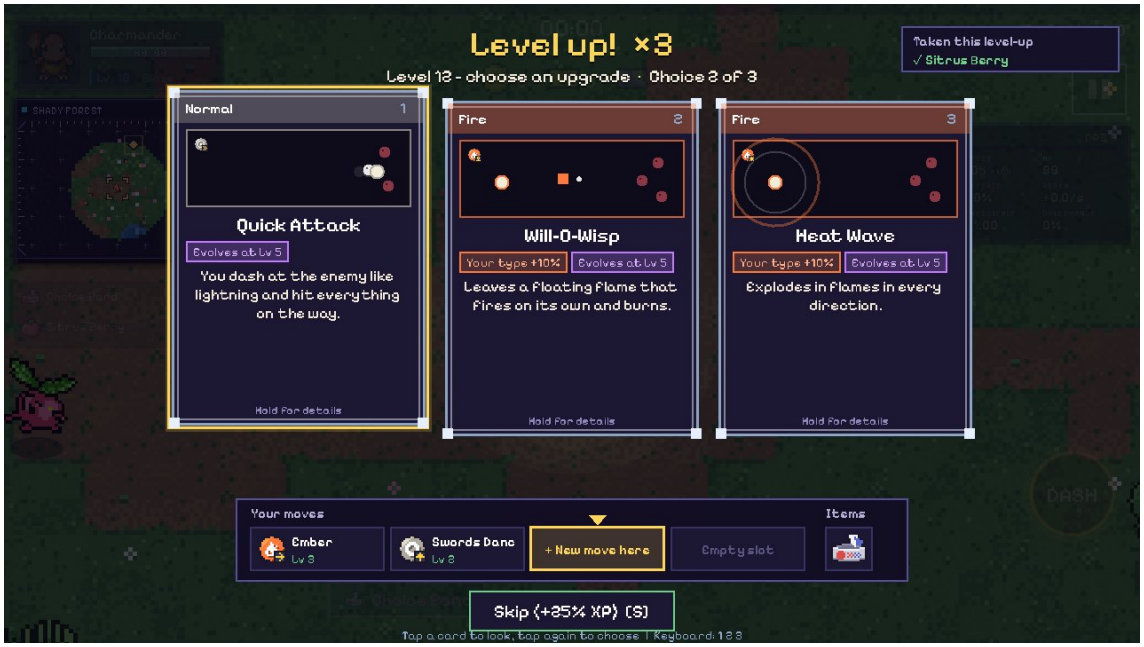

pokemon list mega capable

Mega Rifts

From minute 15 a rift's legendary can arrive in its Mega/Primal/Crowned form (5% -> 30% of rifts), tougher and with a bigger reward.

Rarity-tier cards

Stat cards roll Common, Rare, Epic or Legendary (x1, x1.25, x1.5, x2 bonus); better odds later in a run.

level up cards

Hyper mode

Toggle on Normal Run: the run clock goes twice as fast, with +30% XP and x1.5 coins. Own record and achievements.

Eternamax Eternatus

The 60-minute final boss now fights with Eternabeam, cannons, expanding rings, a tail slam and meteors, and is healed by three obelisks. After the win you can end the run or keep going; he returns every 30 minutes (15 in Hyper) with a reward each time.

eternamax eternatus

Doom (endgame)

Each extra Eternatus you beat raises a Doom level: tougher elites with traits, a bigger swarm, Mega rifts, new Eternatus attacks, endgame cards, Overcap upgrades and scaling coins.

Wild legendaries

From minute 30, up to three legendaries roam among the normal enemies, appearing more and more often.

Dash

Shift/Space, an on-screen DASH button or a controller button. Short burst with brief invulnerability that damages what it crosses.

Mega Calamity

Between two Eternatus fights, a Mega legendary arrives with telegraphed attacks (Stomp and Barrage) and a good reward.

Deoxys formes

A Unique card from minute 5 lets Deoxys switch between Attack, Defense and Speed Forme.

deoxys attack forme

Arceus plates

Arceus starts with Judgment and finds Plates that change its type, its Judgment and its look.

arceus fire plate

Kyurem and DNA Splicers

Kyurem starts with its own move, Glaciate. From minute 30 a Unique card fuses it into Black Kyurem (+40% damage) or White Kyurem (+25% damage, -15% cooldowns). Glaciate then evolves into Freeze Shock (an electrified lance that paralyses) or Ice Burn (white fire that burns).

black kyurem freeze shock

white kyurem

Z-Crystal card

From minute 15 a card can unlock your type's Z-Move for the run (2-minute recharge).

In-run evolution *(alpha.9)*

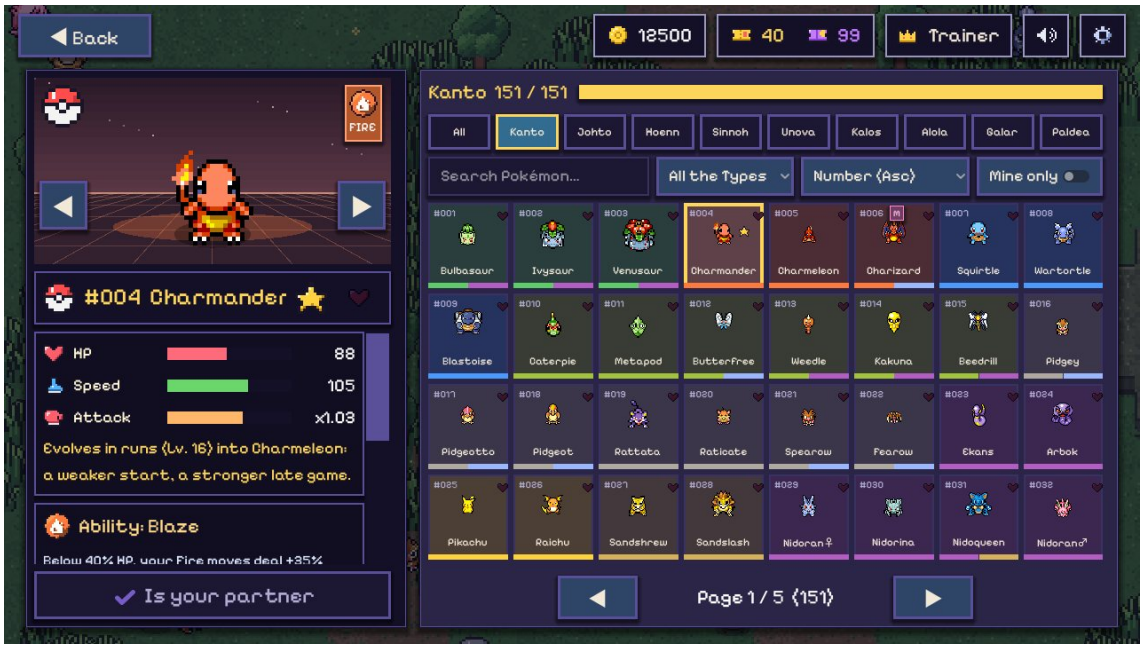

Charmander -> Charmeleon -> Charizard during a run. Pokémon that can evolve get a guaranteed Evolution card at Lv. 16 and 34 (three-stage lines) or Lv. 20 (two-stage lines); Eevee-style branches let you choose. Evolving gives the next stage's stats, a full heal and a permanent bonus. Starting unevolved is weaker early but scales further; starting fully evolved is stronger early and earns a *Seasoned* bonus that grows with your level (about 5% behind late), and only a run that starts as the Mega-capable Pokémon can Mega Evolve.

evolution card

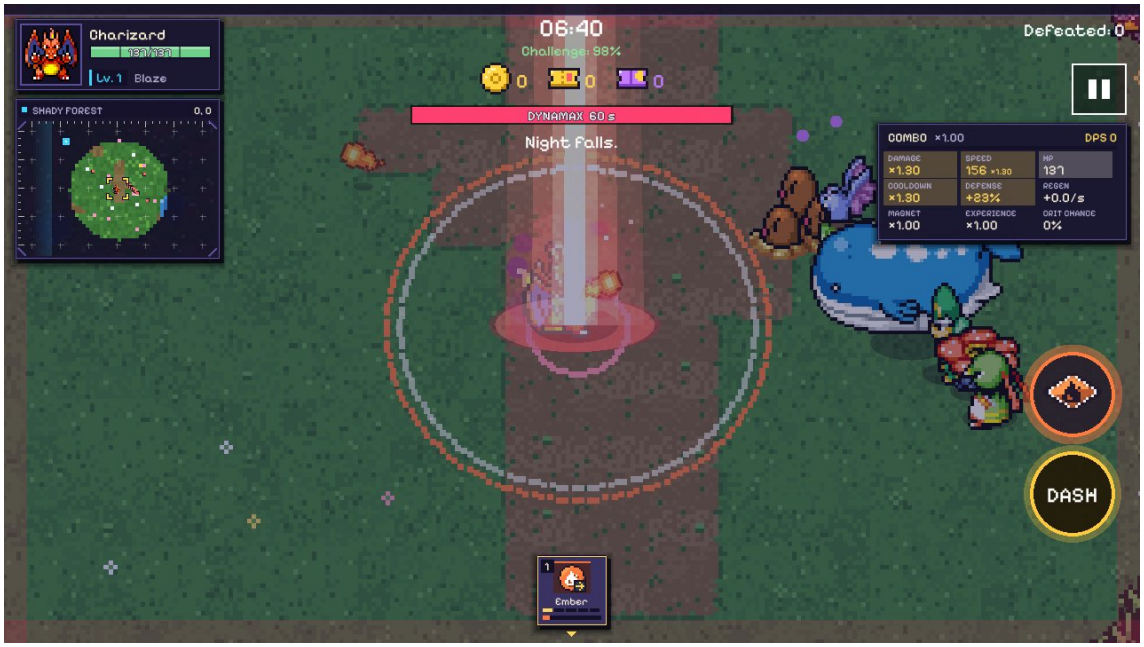

evolved charmeleon

pokemon list evolution line rarity ball

Dynamax and Z-Move visuals *(alpha.9)*

Z-Moves gather energy into your Pokémon during the cinematic; Dynamax drops a beam of light, each Max Wave is a real shockwave and the big ones show the type's Max move name.

dynamax beam

dynamax max wave

z move cinematic

Fusion is a choice

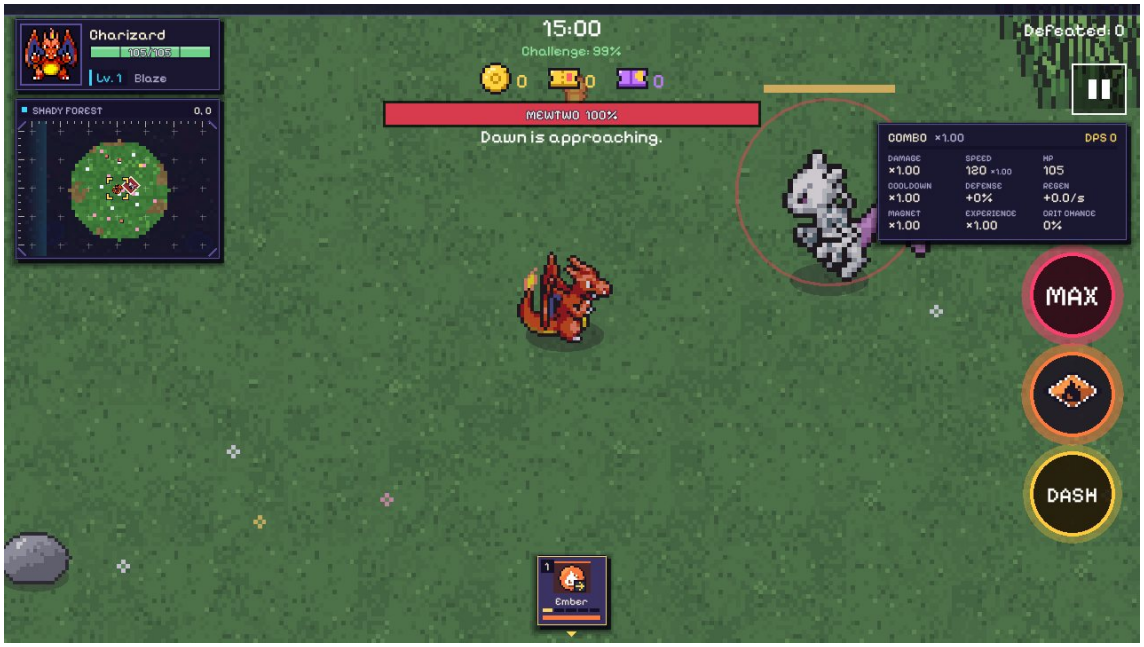

When both moves of a bonded pair are evolved and at max level you are asked: *Fuse* or *Keep both* (a pair you keep is never asked about again that run). You get one Fusion Move per run: after it exists, only a pair that includes it can fuse, so it can grow up to 4 moves, while your other pairs stay bonded. In the move bar a bonded pair shows two linked rings and the Fusion Move a pink diamond.

Bond pairs

A bond always links 2 moves into one slot, and you can keep making pairs as long as 2 moves are free (you can no longer put every move into the same slot). In Team mode each Pokémon keeps its own pairs. Fusion uses the first pair whose two moves are evolved and at max level; the other pairs stay as they are. A bond that can never be used (fewer than 2 free moves and no room to learn one) becomes a free upgrade choice instead of being lost; otherwise it is kept until you learn a move.

Boss HP bar

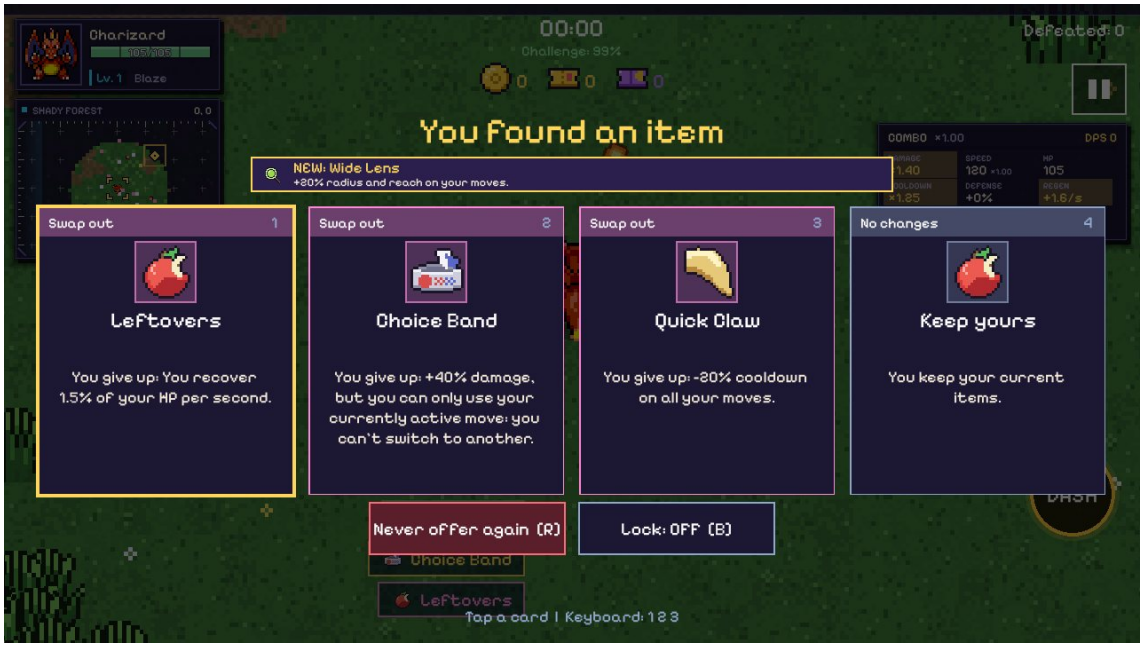

A boss bar at the top centre, below the clock, counters and notices.

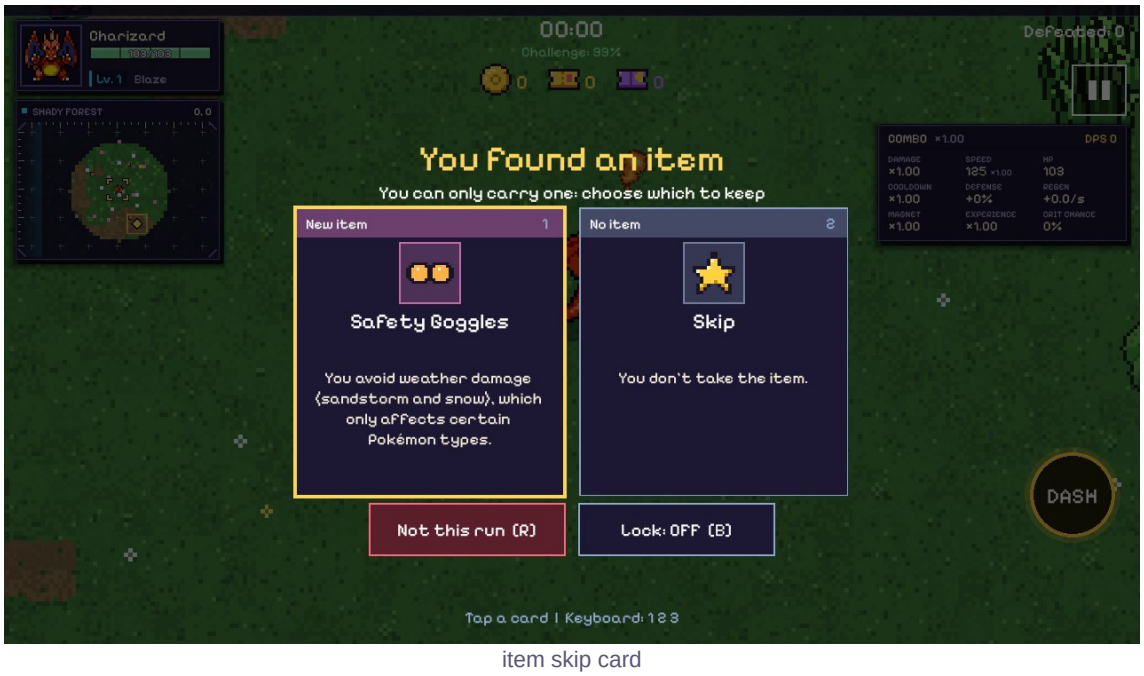

boss hp bar

Item swap screen

Finding an item with a full bag shows the new item once, with one card per item you would give up. With empty hands there is now a **Skip** card, so you can decline an item. **Not this run** (R) stops an item from being offered for the rest of the run; it comes back next run (it used to block the item forever, with no way to undo).

item swap screen

item skip card

View and HUD size

Pause -> **View** zooms the camera from 70% (see much more of the map) to 250% (close up); it used to be 100-200%. On PC the mouse wheel changes it during a run. Settings -> Graphics -> **HUD size** (60-140%, it replaces Screen size and the old 4-step HUD size) scales only the run HUD: health, radar, stats, items, counters and moves. Menus, the pause screen and the level-up cards keep their size.

One way out of a run

The pause screen has a single exit: **Save and quit** in Normal runs (the separate Quit run button is gone), and **Quit run** in the modes that can't be saved (Daily Challenge, Tower, Boss Rush, challenges...). When a Normal run can't be saved at that moment (a boss fight, rift or other special event), Save and quit explains why, warns that the run won't be saved, and offers **Quit run** or **Cancel**.

A look for every move

Moves no longer reuse another type's attack in a new colour: all 128 moves have their own look that fits the name. Body Slam squashes down, Karate Chop drops a hand-blade, Lick unrolls a tongue, Swords Dance circles you with swords, Harden closes steel plates in, Ice Beam grows ice crystals, Flash Cannon is a white-hot flare, Fire Spin throws rings of fire, Fire Lash is a whip of flame, Grass Knot raises roots, and more (see docs/move_visuals.md). A test stops new re-skins from creeping back in.

move looks

Status effects you can read

Asleep enemies show a floating Zzz, paralysed ones circling stars and confused ones a spiral with question marks, so you can tell at a glance what your moves did. Critical hits flash with sparks, opening chests, parcels and supply crates bursts with sparkles, and experience from bosses, legendaries and Eternatus drops as glowing orbs that swirl, so rare drops stand out from normal XP crystals. Effects from pixelfx (see Credits).

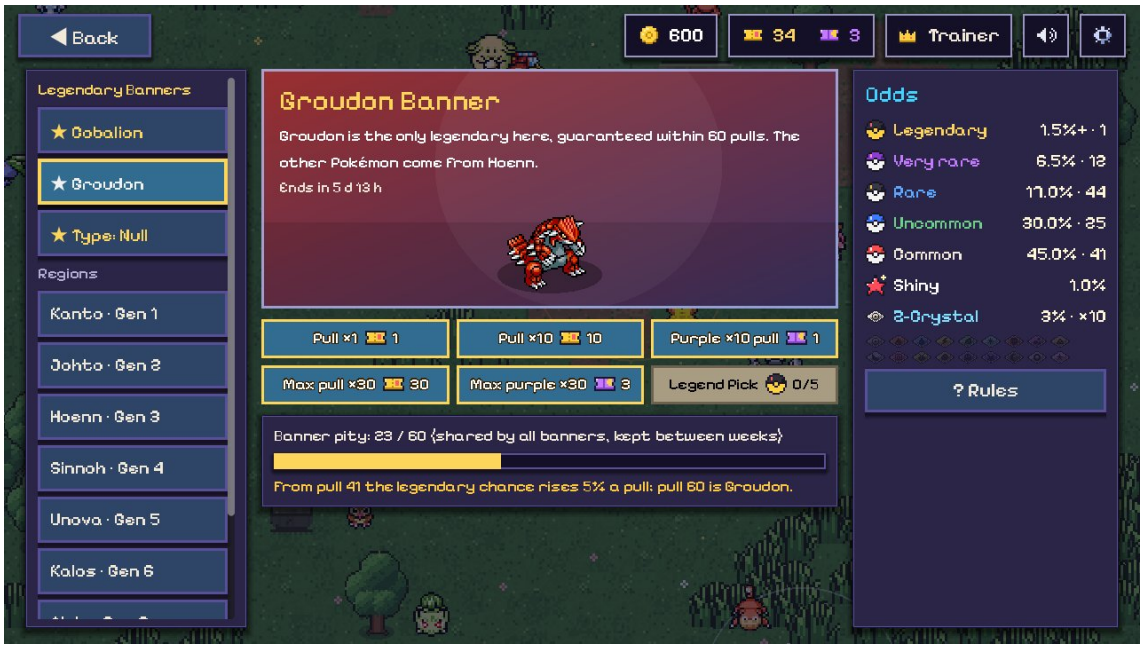

status effects

Test builds only if you want them

The update notice only offers full releases. Test versions are offered to players who already play one, or who turn on Settings -> Account -> **Get test builds**.

Legendary Banners

Three banners a week, the same for everyone and new every Monday (Puerto Rico time), each featuring one legendary from a different generation. The featured legendary is the banner's only legendary, and its other Pokémon come from that legendary's region. Banner pity: 1.5% per pull up to pull 40, then +5% a pull, and pull 60 is guaranteed (about 33 pulls on average). Pity is shared by all banners and kept between weeks. Once you pull a banner's legendary, that banner closes until the next rotation. x10, Purple x10 and Max pull work on banners, and Max pull stops as soon as the legendary drops.

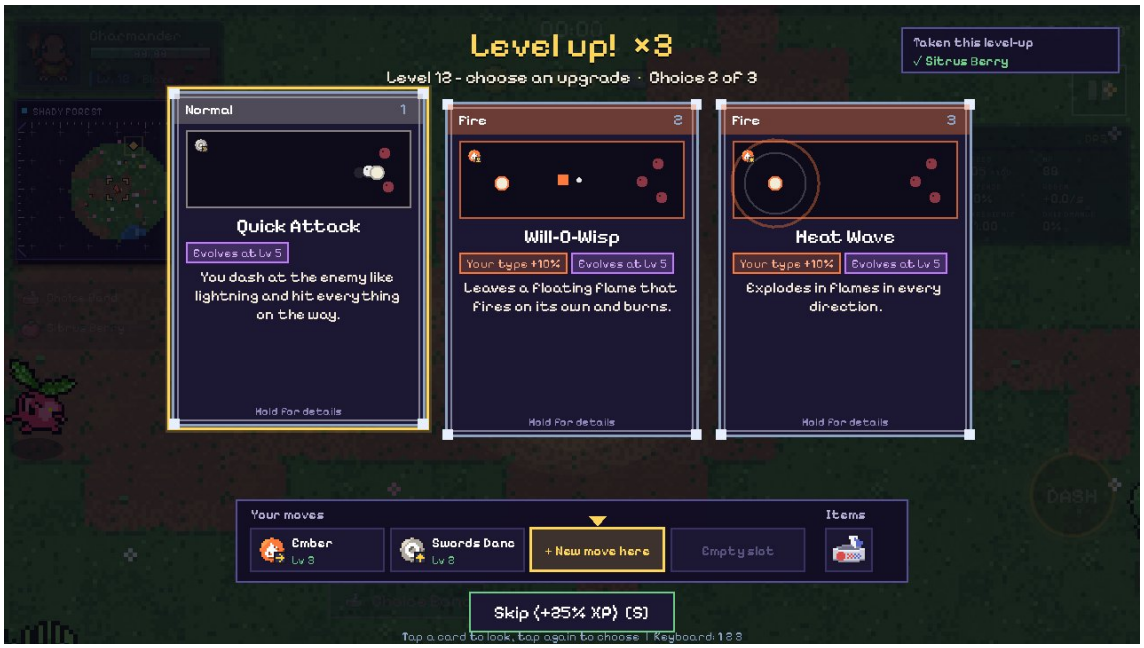

legendary banners

Shiny Charms

Own every Pokémon of a region to earn that region's Shiny Charm (a ? next to the region on the Gacha page). It only boosts that region: its wild Pokémon are shiny 3 times as often (1 in 4,096 becomes about 1 in 1,365), its rift legendaries twice as often, and its gacha (and any Legendary Banner drawing from it) gets +1% shiny chance.

Level-up cards

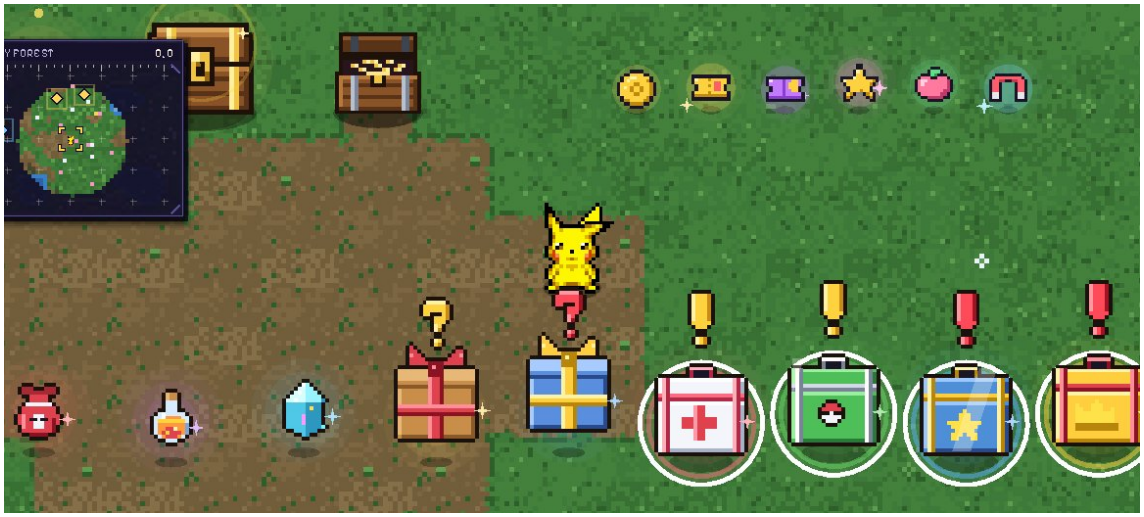

The cards deal in and flip over (no more waiting bar), with a frame for each rarity: bronze, silver, purple and gold, plus sparkles on Epic and Legendary cards. Move upgrades show exactly what changes ("Cooldown 0.52 s -> 0.39 s"), and cards show badges such as "Your type +10%" and "Evolves at Lv 5". A strip under the cards shows your moves and items and lights up the slot the highlighted card goes into. On phones you tap once to look and again to choose, swipe between cards, and hold a card for its full text. Several level-ups at once show "Level up! x3", one pick after another with a list of what you took. The run's HUD dims behind the cards.

level up cards

Pickups that shine

New chest art (wood planks, iron bands, a gold lock, and a gold-banded big chest; open chests show their treasure). Chests, mystery parcels, supply crates, Poké Ball Pouches, Elixirs and Prism Crystals glow in their own colour, catch a light sweep now and then and twinkle, with a ground shadow that breathes with their bob. Rare drops (tickets, items, berries, magnets) bob and sparkle; coins and XP stay still so a screen full of them stays fast.

pickups

Mega Stones from Mega rifts

Each run has one Mega Stone rift for a Pokémon that can Mega Evolve: from minute 15 every rift has a small chance to be it (10%, rising to 25%), and at minute 20 the next rift check opens it for sure (7.5 and 10 real minutes in Hyper). Beat it and your Pokémon gets its Mega Stone (or orb / relic), with the Mega Evolution card right after. Lose it, or let it close, and you wait for minute 30. In the overworld it looks its own: a Mega pink and gold portal with a double helix around it and your Pokémon's Mega Stone floating above, a pink arrow and sign (*A Mega Stone rift has opened!*) and a pink mark on the minimap. Mega rift bosses call minions of their type (3 at a time, at most 6). Other Mega rifts give a Legend Shard. Mega Evolved, your dash cooldown is 30% shorter. Without a stone, Mega Evolution still unlocks at minute 30 (15 real minutes in Hyper): you are told, and the card is offered at every level-up until you take it. It follows the Pokémon you are now, so a Charmander that has become Charizard can Mega Evolve, but a run started with a Pokémon that can still evolve pays for it: its Mega Stone rift is much rarer (about a seventh of the chance) and never forced, and without the stone the Mega card stays a random chance after minute 30 (about 1 level-up in 8) instead of guaranteed.

Entering a rift

Touching a rift pulls you in: the screen closes around your Pokémon with a swirling edge in the rift's colour, the camera pushes in and your Pokémon spins into the rift (you can't be hit meanwhile). The arena then opens with a flash, rings and a rumble, and a banner names the legendary (*Legendary Rift*, *Mega Rift* or *Dynamax Den*), with the Pokémon appearing as a silhouette that flashes into colour.

New trap look

Traps are oval stone pressure plates set into the ground, each with a glowing core and sign for its effect: purple bubbles (poison), green web (sticky, slows), orange cracks (fire), blue snowflake (freeze), yellow bolt (paralysis), indigo moon (sleep) and pink spiral (confusion). Their danger area is a faint circle with a slowly turning dashed ring. On the minimap a trap is a little spiked mark in the same colour.

traps

Reliable pickups

Pickups are collected within a reach that grows with your Pokémon's size, along the whole path you moved that frame (a dash or a fast step can't skip over them at low frame rates), and pulled pickups always fly faster than you run. Map items (Poké Ball Pouches, Elixirs, Prism Crystals, mystery parcels and supply crates) can be picked up and opened during boss and legendary fights too; only new ones stop appearing. An item that is no use right now (bag full, a power-up already active, no enemies nearby) says why it stays on the ground.

Item cycling and chest pity

Items cycle: every item is offered once before any repeats. After 2 chests without an item, the next chest always contains one.

Effects under the Pokémon

Rings, hit arcs and beams come out from under the sprite; limits on live effects keep busy runs smooth.

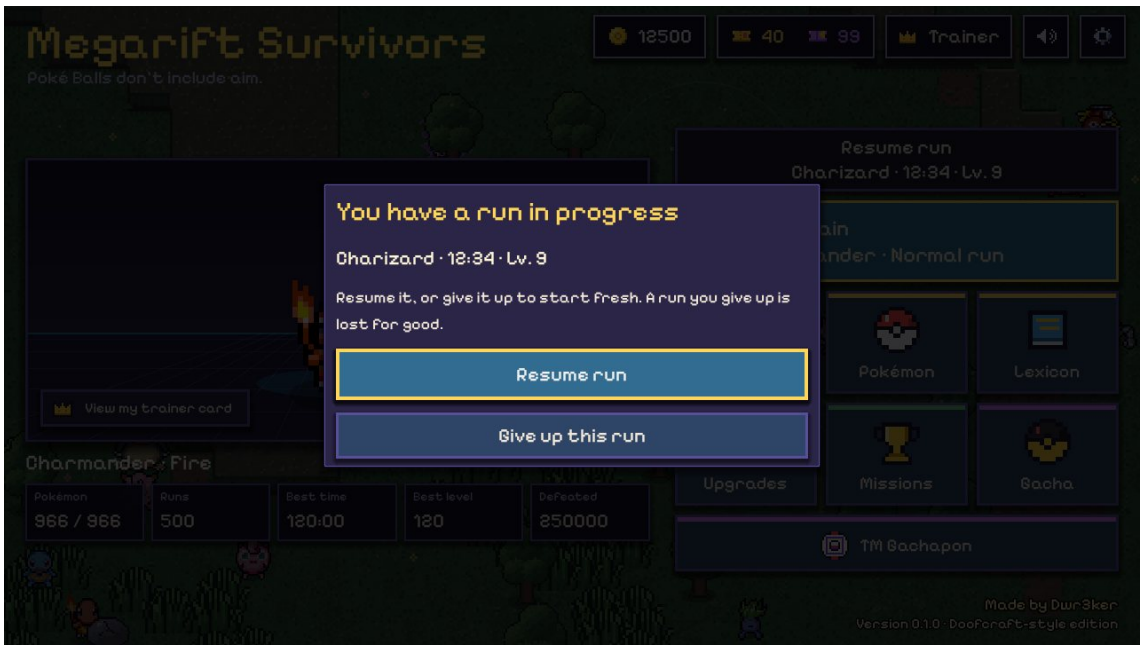

black kyurem freeze shock

Balance

+10% damage with your own type, Momentum for chained defeats, speed cap, shorter enemy shields.

Save and resume

Pause -> *Save and quit* stores a Normal run; the menu reminds you of it and offers *Resume run* or *Give up*. A resumed run keeps the permanent upgrades it was saved with, so you cannot leave, buy upgrades and come back stronger. Kecleon purchases and your reservation are kept too. Save codes are compressed (about 14,000 characters for a full save).

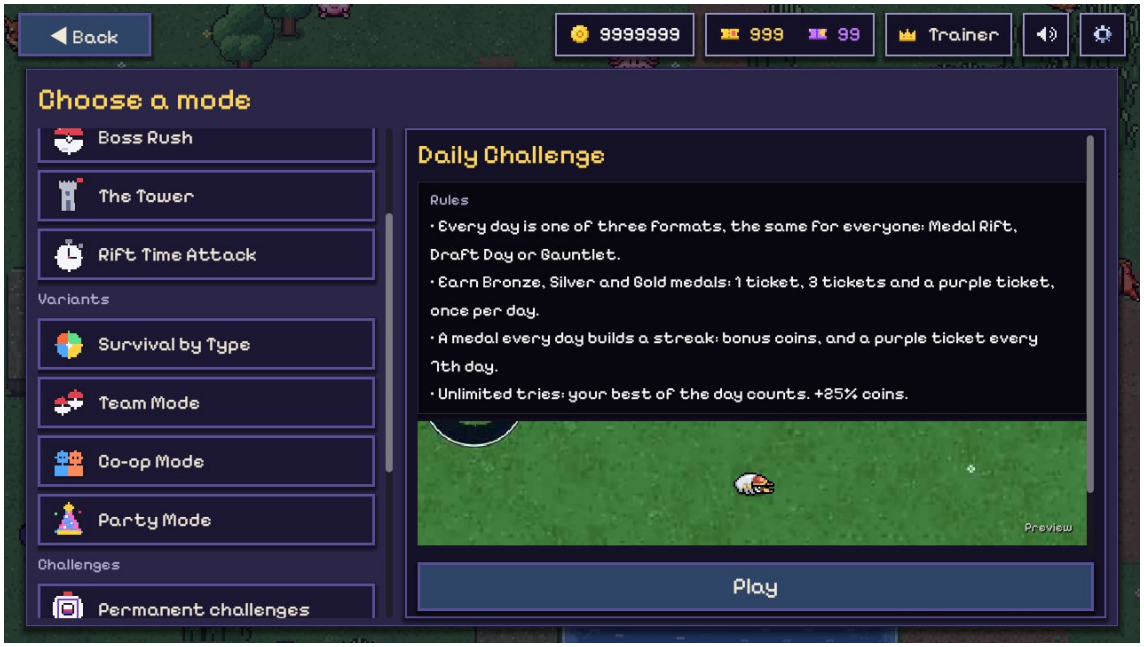

resume reminder

main menu

Daily Challenge

Every day is one of three formats, picked by the date and the same for everyone: **Medal Rift** (one Pokémon, two rules, score points), **Draft Day** (choose 1 of 3 Pokémon, each with its own rule) or **Gauntlet** (a new rule joins every 5 minutes; survive 20 minutes). Points = defeats + 300 per boss + 5 per second. Bronze / Silver / Gold (3,000 / 8,000 / 15,000 points, or 5 / 10 / 20 minutes in the Gauntlet) pay 1 ticket, 3 tickets and a purple ticket, once per day. A streak of days with a medal pays 50 coins per day (up to 300) and a purple ticket every 7th day. Unlimited tries; the best of the day counts.

daily challenge

Evolution scene

Evolving from a level-up card plays like the main games: the world pauses, light gathers into your Pokémon, its white silhouette swaps between the old and new form faster and faster, a white flash, then the new Pokémon fades in with a "Congratulations!" box.

evolution scene morph

evolution scene reveal

Buff badges

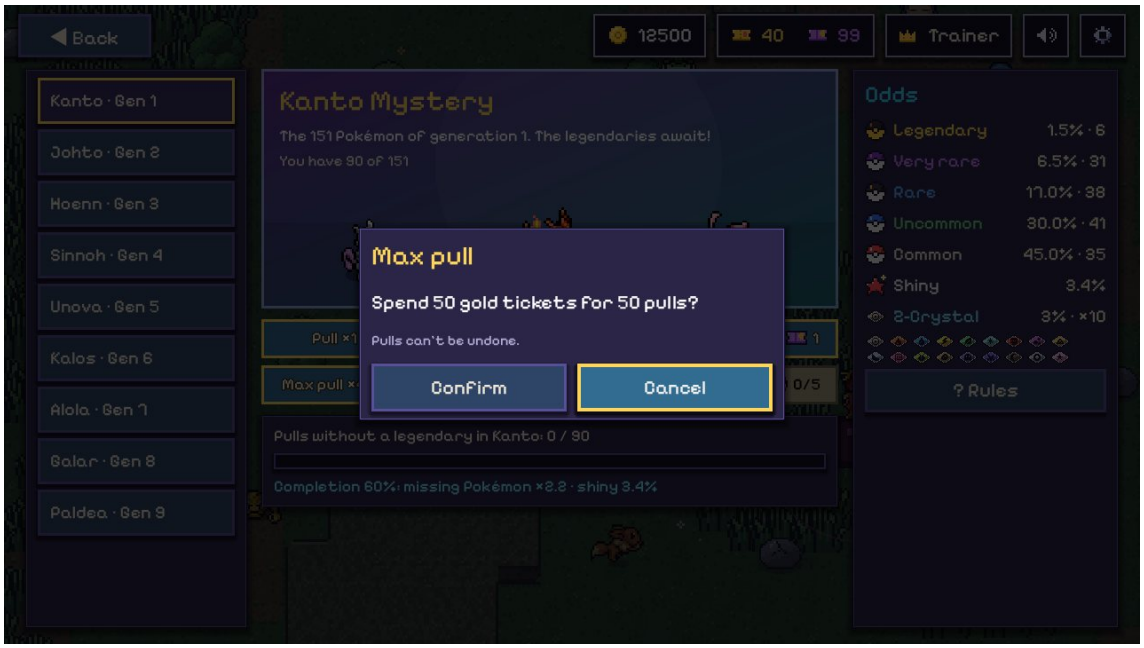

Attack, Speed, Defense and Regen boosts show beside your Pokémon: an icon, one rising arrow per stack (a number past 5), and a ring for the time left that blinks before it runs out.

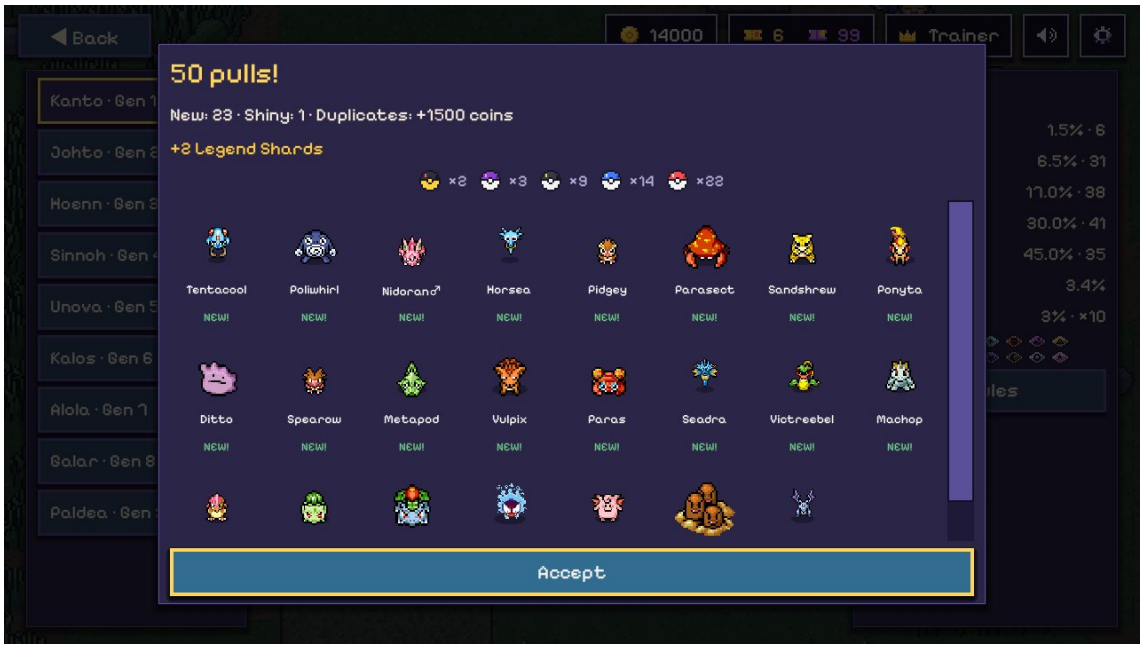

buff badges

Max pull

Two gacha buttons spend gold tickets in batches of 10 (56 tickets -> 50 pulls) or purple tickets (7 tickets -> 70 pulls) after a confirmation, up to 100 pulls at a time (the rest of the tickets stay). Each batch keeps its own Very Rare guarantee and Z-Crystal roll, and a summary lists the new Pokémon and shinies.

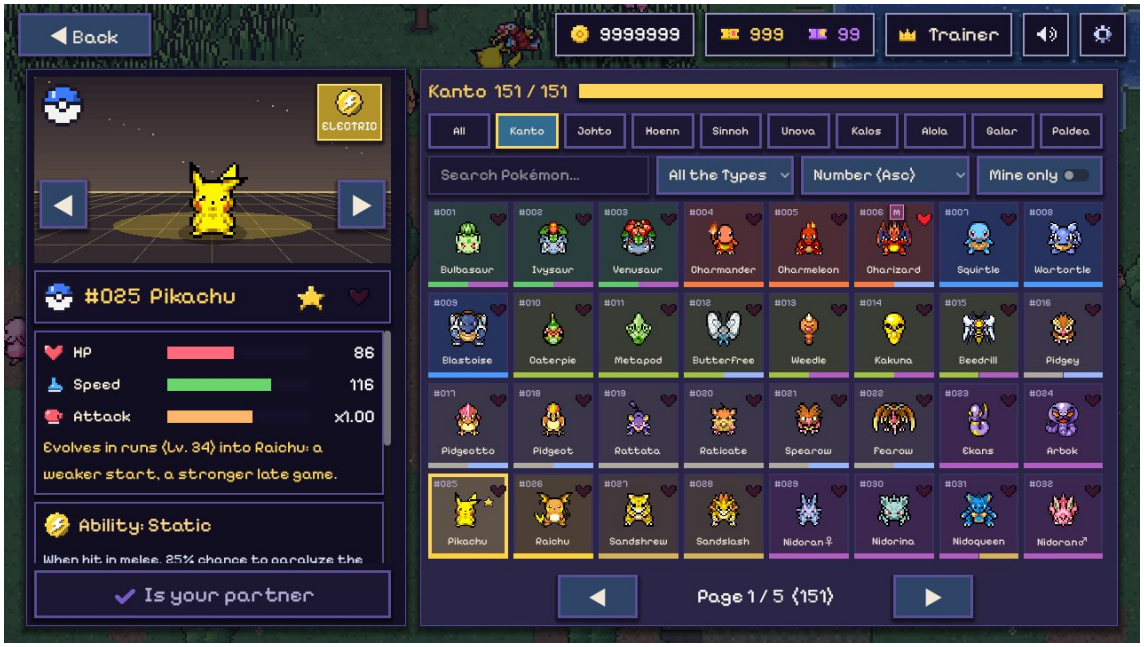

gacha max pull confirm

gacha max pull

Favorites with a controller

In the Pokémon list the top face button (Y on Xbox, Triangle on PlayStation, X on Nintendo) toggles the highlighted Pokémon's favorite heart. Cards show bigger Pokémon and a bigger heart.

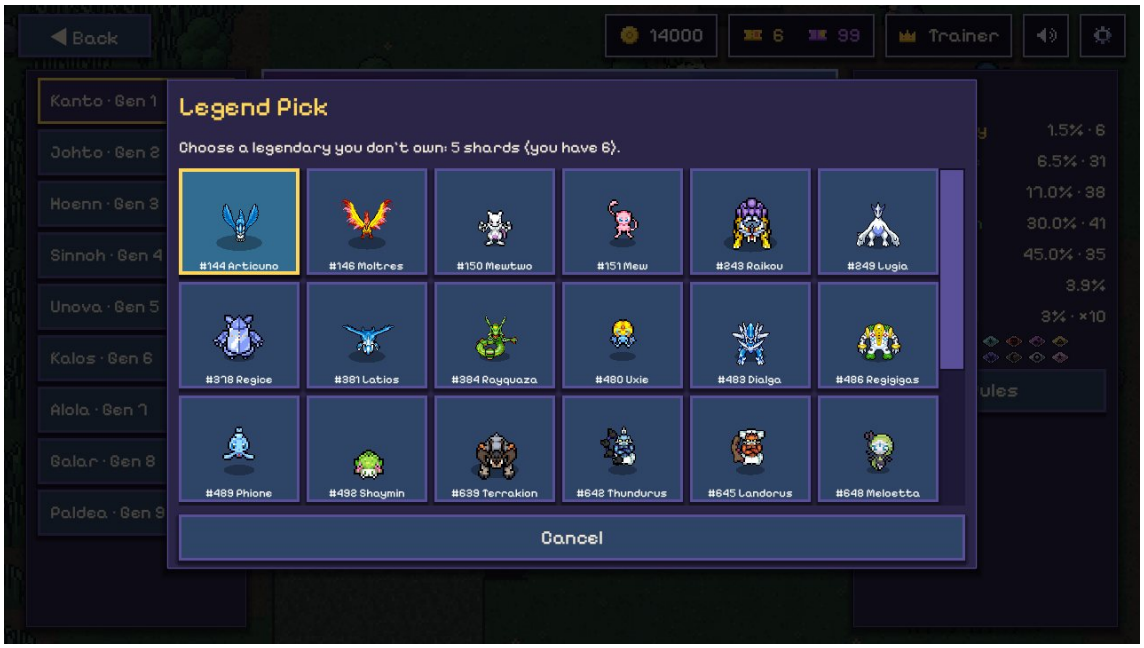

pokemon list favorites

Legend Shards and Legend Pick

Every legendary duplicate from the gacha gives a Legend Shard on top of its coin refund, and every Eternatus defeat gives one more (banked when the run ends). On the Gacha screen, **Legend Pick** spends 5 shards on any legendary you don't own, chosen from a grid.

gacha legend shards

legend pick

Move previews

When a level-up card offers a new move, its icon slot becomes a small looping arena: your Pokémon, three foes and the move's pattern in its type colour (shots, beams, cones, rings, orbiting orbs, dashes, meteors, mines, chains, turrets and more), so you can see how it attacks before you take it.

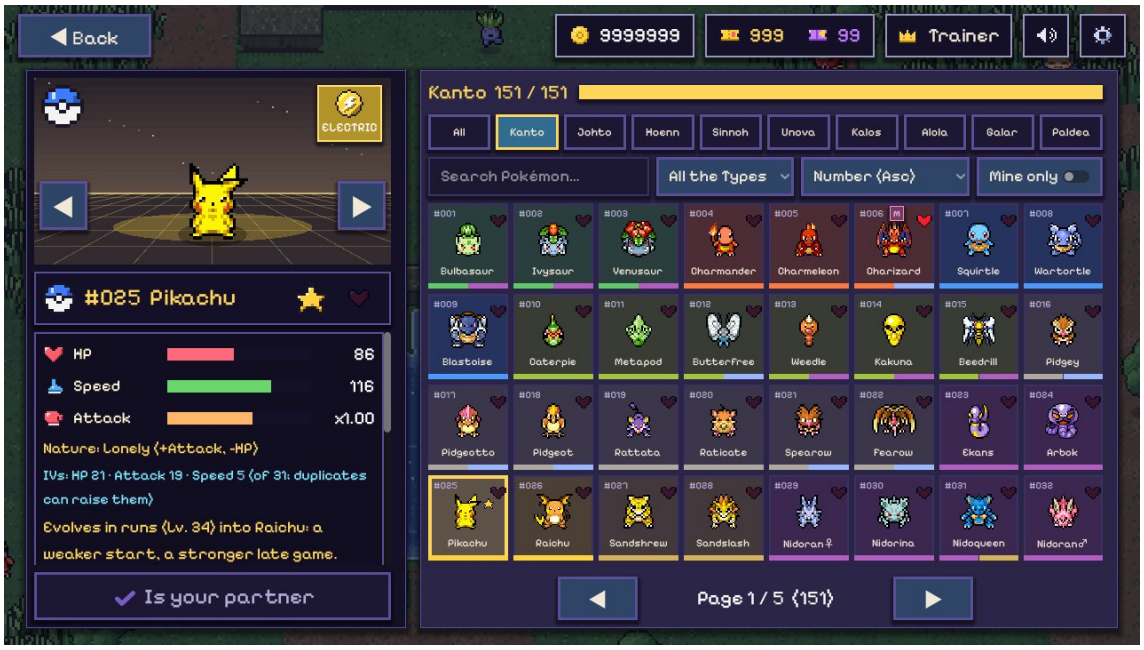

move previews

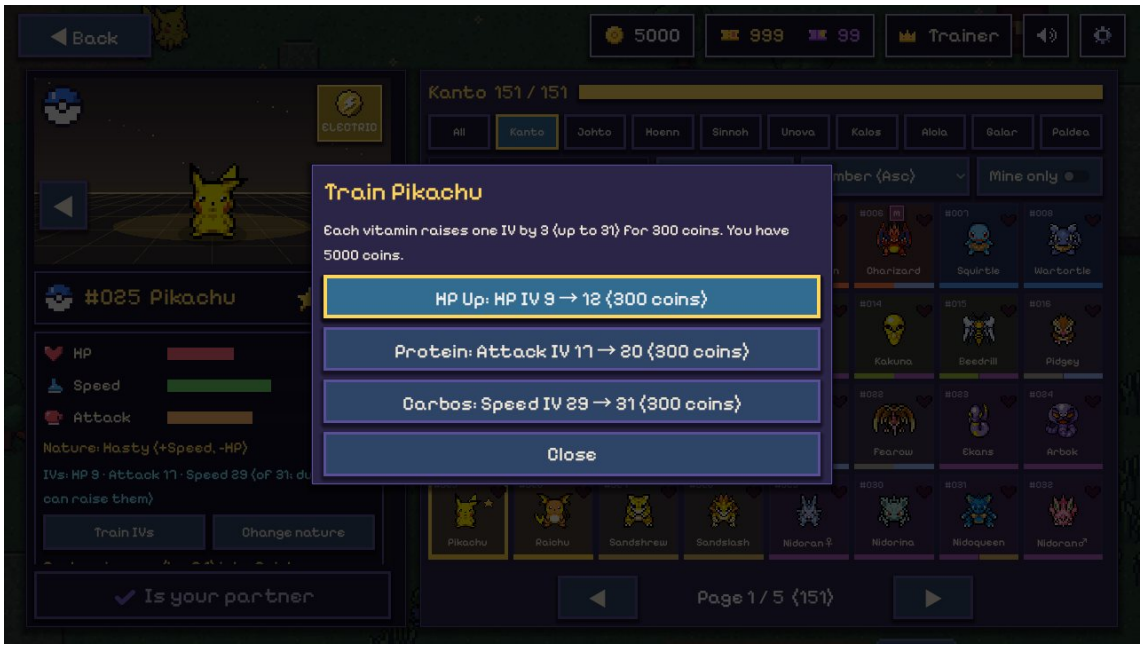

move previews 2

IVs and natures

Every Pokémon you own has IVs (0-31) in HP, Attack and Speed, each worth -5% to +5%, and a nature: Lonely, Bold, Brave, Timid, Hasty or Relaxed (+10% on one stat, -5% on another, so a random roll is never a real setback) or a neutral one. They apply in runs (an evolved Pokémon keeps the ones it started with). A duplicate re-rolls each IV and keeps the better value. The Pokémon page shows them. Pokémon you don't own (a daily pick) are neutral. **Training** on the Pokémon page: HP Up, Protein and Carbos raise one IV by 3 (up to 31) for 300 coins each, and a **Mint** unlocks a new nature for 1,000 coins. A duplicate also brings its own nature: every nature a Pokémon has had (from duplicates or a Mint) can be switched to for free.

Region maps

Pressing Play on a Normal run opens the region picker: every region with an in-game snapshot (`tools/capture_regions.ps1` refreshes them), its two biomes and your best time. **Kanto** is open from the start, and each next region unlocks by **defeating Arceus** (the Judgment at minute 30) on the previous one (Kanto -> Johto -> ... -> Paldea). **Every region** (the classic run) is always available. Saves from before region maps keep their progress: a player who has beaten Eternatus starts with every region open, and one who has beaten Arceus starts with Johto open. Regions opened under 0.1.1's old rule (survive 30 minutes) stay open. A region run uses its two biomes (for example Hoenn: Sea Grotto, then Igneous Volcano after the first boss) and its wild Pokémon, bosses, rift legendaries and roaming legendaries; a stage with fewer than 4 of the region's Pokémon borrows from the others.

region map picker

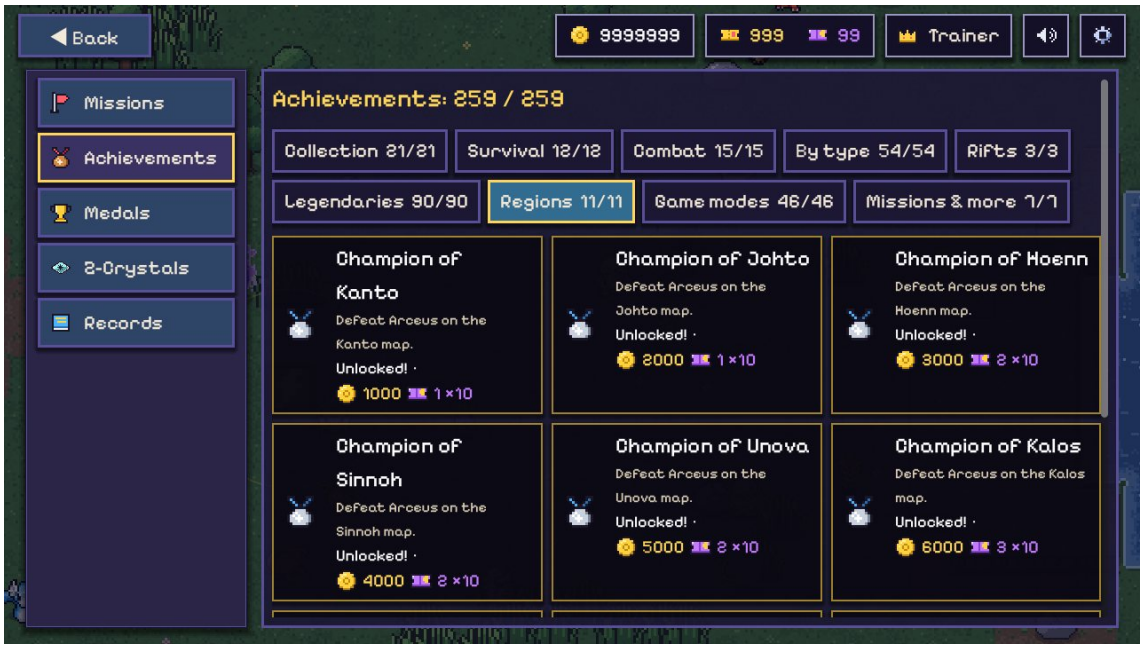

region map hoenn

region map kalos

Achievements for the new features

A new **Regions** tab: Champion of Kanto ... Champion of Paldea (defeat Arceus on each map), Region hopper (3 regions) and World Champion (all 9, with a title). Plus Perfect specimen / Flawless squad (31 in all three IVs), Nature's palette (all 11 natures on one Pokémon), Personal trainer (25 vitamins), Fresh breath (a Mint), Shard collector / Shard hoarder (5 / 25 Legend Shards), Hand-picked legend / Legend curator (1 / 5 Legend Picks), All in (a Max pull), Golden day / Gold standard (1 / 10 daily Gold medals), Week of medals (a 7-day daily streak), and Layaway / Regular customer (1 / 10 Kecleon reservations). Region clears, perfect IVs and natures count what your save already has.

achievements regions

Gacha completion bonus

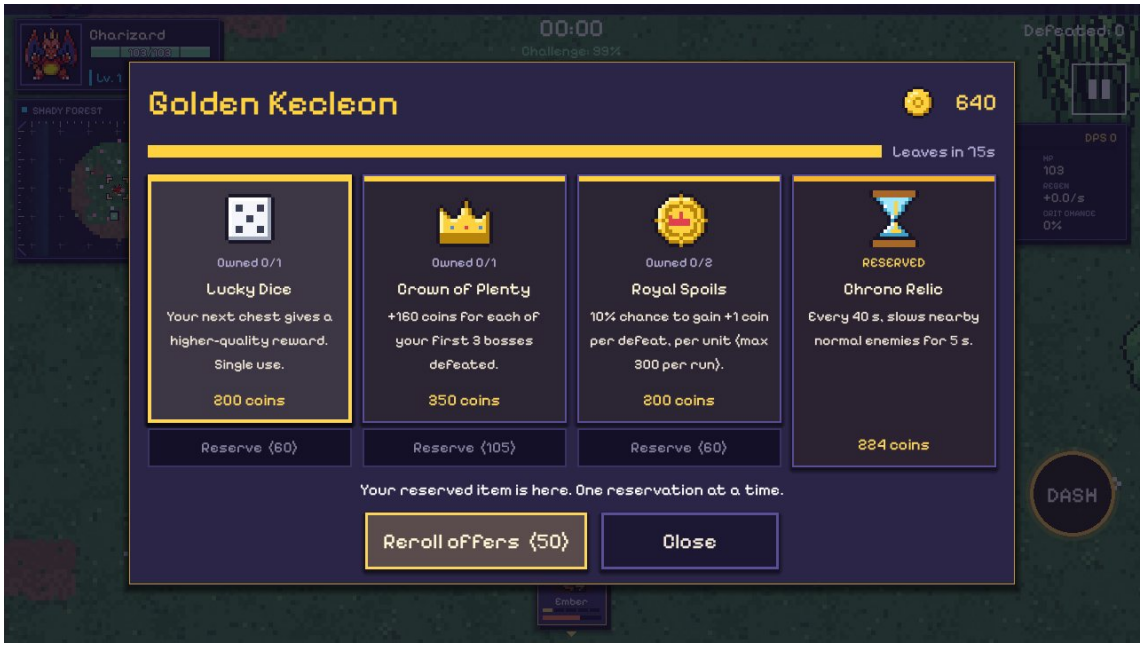

The more of a region banner you own, the better your odds: Pokémon you're missing weigh up to x3 within their rarity, and the shiny chance rises smoothly from 1% to 5% at 100% completion. The banner screen shows the current values under the legendary pity bar.

gacha completion bonus

Kecleon shop

Offers are cards framed in the Kecleon's color, with an icon, price, how many you own and a bar showing how long Kecleon stays. **Reserve**: pay 30% to hold an item you can't afford yet. This uses up the visit's purchase, and the next Kecleon of any color brings it for the remaining 70%. One reservation at a time; if the item can no longer be given (for example Lucky Dice is already active), the 30% is refunded. Keys 1-3 buy offers, 4 buys the reserved item.

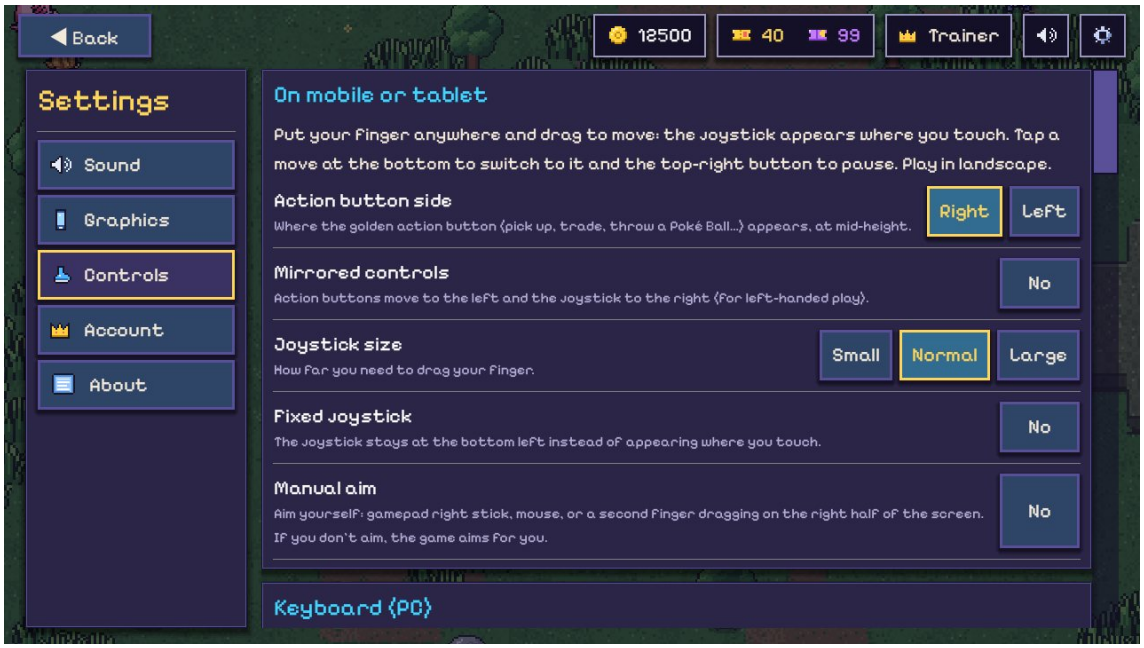

kecleon shop reserve

Customisation

HUD layout editor (move, resize and hide every on-run element, the Dash button included, with presets), radar switch, per-Pokémon *Use shiny version*, a Poké Ball on each Pokémon's page that shows its rarity, keyboard rebinding and gamepad remapping.

hud layout editor

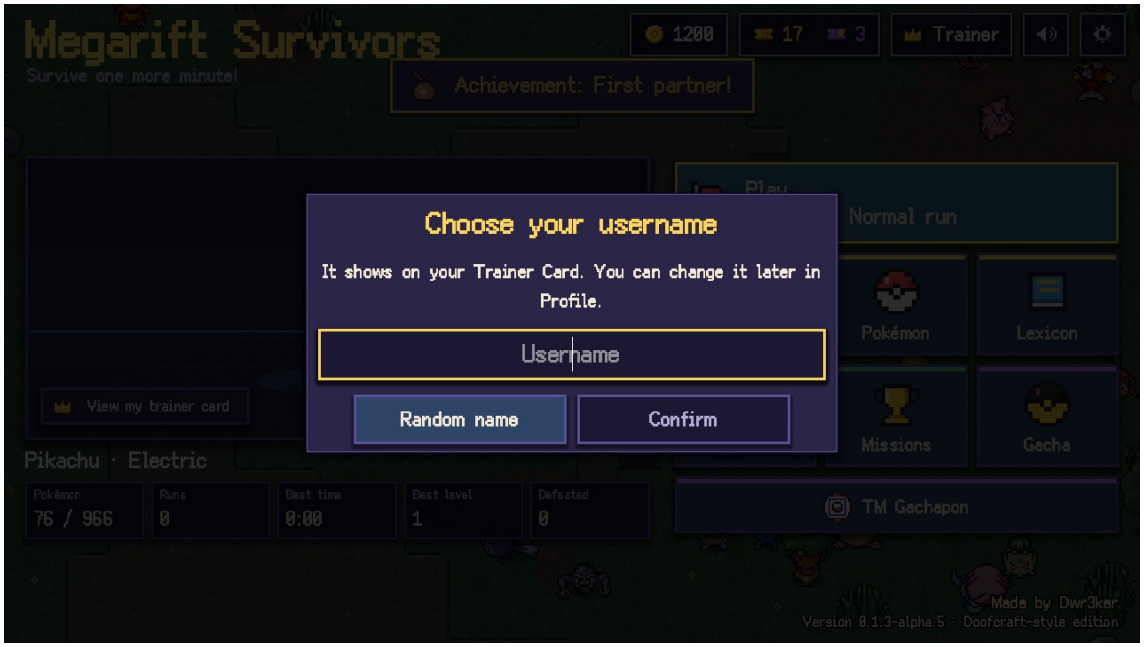

settings controls

Redeem codes

Settings -> Account -> Redeem code unlocks special bundles, random Pokémon and a chosen Pokémon (alpha.9). Each code works once per save.

Username

The first time the game starts it asks you to choose a username (or roll a random one). It shows on your Trainer Card and in the top bar, and you can change it later in Profile.

username prompt

Pokémon list filters

Besides region, type (each with its type icon), search and sort, a **Show** filter picks All Pokémon, Owned, Unowned, Shiny (shinies you own) Mega capable (Pokémon with a Mega, Primal or Crowned form) or Favorites, and the **Mine only** switch (next to the collection bar) hides Pokémon you don't own on top of any other filter, and a grid size option at the bottom switches between Small, Medium and Large cards (more Pokémon per page, or bigger cards). The list remembers all of these, region tab and Mine only included, the next time you play.

pokemon list small grid

pokemon list type filter

Region banners open with their region

A region's Gacha banner can be looked at any time, but you can only pull on it once the region is unlocked (defeat Arceus on the region before it); locked ones say *Locked* in the list and tell you how to open them. Kanto is always open, and the weekly Legendary Banners stay open to everyone. Pokémon you already own are kept.

Sharper small text

The pixel font is drawn on a 12 px grid, so text at 15 px or less is now drawn at exactly 12 px and without the extra boldness (which filled in small letters). Card numbers are brighter and long names end in "...". This applies to the menus and to the run's HUD, stats box and level-up cards.

Types at a glance

In the Pokémon list each type has its own chip (colour, icon and name) on the portrait, and every card has a type band with each type's icon.

Mega Stones on cards

In the Pokémon list a Pokémon that can change form in runs shows the item it uses instead of a letter: its Mega Stone (coloured after its Mega form's types), the Red or Blue Orb, Rayquaza's shard, or Zacian's and Zamazenta's rusted sword and shield. The same icon sits next to the line about it in the details, and on the Mega Evolution / Primal Reversion / Crowned Form card during a run. The icons are drawn in code (scripts/megastone.gd).

IVs and nature in Upgrades

The Upgrades screen shows the chosen Pokémon's nature and IVs, with *Train IVs* and *Change nature* buttons, the same as in the Pokémon list.

Fits any screen

The main menu, the Pokémon list and the level-up cards size themselves as shares of the screen, so 16:9, 16:10 and 4:3 screens (handhelds) are filled without empty bands: the stage and the menu tiles stretch, collection cards grow to fill the grid, and the level-up screen is drawn bigger on taller screens.

Controls

	Keyboard	Touch	Gamepad (default, remappable)
Move	WASD / arrows	joystick	left stick
Switch move	1-6, Q / E	tap a move icon	LB / RB, D-pad
Dash	**Shift**, or **Space** when nothing is nearby to interact with	**DASH** button	**Cancel button** (B on the Xbox layout); it shares the button with "Back" in menus
Z-Move	Z	Z button	left stick click
Dynamax	C	MAX button	X
Build summary	Tab	pause button	View / Select
Options (pause)	Esc / P	pause button	Menu / Start
Team swap (Team Mode)	R	-	right stick click
Zoom the view	mouse wheel (up = closer, 5% a notch; saved as Pause -> View)	Pause -> View	Pause -> View
Choose partner (Pokémon list)	Choose button	Choose button	X / Square / Y

The gamepad layout (Xbox, PlayStation, Nintendo) and every gamepad button and keyboard key can be changed in **Settings -> Controls**. In the Pokémon list, LB / RB step through the regions and the left face button (X / Square / Y) makes the highlighted Pokémon your partner; Confirm on a text box opens the on-screen keyboard. Also in the Pokémon list: Left from the first column of cards jumps to the details (Train IVs, Change nature, Choose), Right from the details goes back to the cards, and the right stick scrolls the details. Dropdown lists highlight the item you are on with a gold box.
